### Tree Order and Planting Additional Information:

1. If you wish to have the District assist with your planting, you must contact the District to develop a Planting Plan, and review the requirements of the planting. Notably, the landowner must provide a tractor and tractor driver for both tree planting and tree matting installation, and the planting site must be properly prepared.
2. If you are having the Continuous Tree Matting installed, a tractor with a **Category 2 3-Point Hitch is Required**.
3. You will be notified when your tree order will be ready for pick up 1-2 weeks prior to the pickup date. You will be contacted by the method you selected on the first page of this order form. Trees will be picked up at the SWCD building at the **Meeker County Fairgrounds**. Signs will direct you to the correct building.
4. 5' Tree Tubes & 15" Rigid Mesh Protectors come from Plantra. If you wish to do additional research on these products please visit [www.plantra.com](http://www.plantra.com)
5. It is recommended that you plant your bare root trees as soon as possible after you pick them up. If you are not able to plant them right away; keep the roots moist, and store in a cool, dark place like your garage, basement, or shed. 40°- 60° is ideal for short period. If they need to be stored for a longer than a week, it is recommended to "heel in" the trees outdoors.
6. Care for trees after planting is critical for their survival! Control weed pressure around the trees and water frequently
7. Fertilizer during the first year of establishment is not recommended.
8. **Watering Recommendation:** 1-2 weeks after planting: Water Daily. 3-12 weeks after planting: Water every 2-3 days. After 12 Weeks: Water weekly. 1 to 1.5 gallons per tree is sufficient for trees this size.
